

WeedGuard Plus[®]

Patent pending

Organic Formulation
Suitable for Certified
Organic Production

**Easy to use,
100%
biodegradable
WeedGuard[®]
gives plants
a stronger,
earlier start.**

Effective Chemical Free Weed Control! **Blocks weeds NATURALLY!**

- Allows air and water through
- Made from natural cellulose fiber
- Gradually decomposes
- Lasts a full growing season
- No clean up, tillable into soil

A product of SunShine Paper Company, LLC
Aurora, Colorado
12601 East 33rd Avenue
Aurora, Colorado USA 80011
1-800-654-5432

Made in USA
Patent Pending

Installation Tips: **Using WeedGuardPlus with a Flat Bed Layer**

- 1 Do NOT lay out on windy days
- 2 Take all the tension off the WeedGuardPlus rolls. Roll should unwind freely.
- 3 If you are using a 3 point hitch – TAKE ALL THE “SWAY” OUT

- 4 Trailing pneumatic tires need to be perfectly vertical and be aligned on the outer 2” of the WeedGuardPlus

- 5 After setup is complete, try laying out the WeedGuard.

IMPORTANT: Have someone walk behind to observe and locate source of any tears.

- 6 Usually the wheels need adjustment (up, down, in, out); Wheels: NO tilt, NO angle, NO pressure

WeedGuardPlus Plain for flat bed layer
Choose “creped” for slightly raised beds

Installation Tips: **Hand Laying of WeedGuardPlus**

1 Do NOT lay out on windy days

2 Place roll on ground. Place a heavy stone on each corner as you start to unroll the WeedGuardPlus

3 You can put a long pipe or broom handle through the core of the material to assist in unrolling

4 Unroll slowly and toss soil along both edges. We recommend 4"– 6" of soil on the edges to prevent wind from blowing the material away

5 When you reach the end of the crop row, cut the roll and place soil on the edge

6 Remove the heavy stones and place soil on the edge

7 Cut an "X" into the material where you want to plant, fold back the corners, and plant as you normally do

8 Fold back the material where you've made the "X" cut and water
