Neptune's Harvest

CONTAINS NON-PLANT FOOD INGREDIENT(S):
12% HUMIC ACIDS (DERIVED FROM LEONARDITE)
88% WATER (H₂O)

12% Humate Concentrate is a liquid concentrate that contains 12% available humic acids by weight. Humic acids are not a plant food. Humic acids may increase the availability of micronutrients. 12% Humate Concentrate has been thoroughly filtered through a 200-mesh screen and will not clog spray or irrigation equipment.

12% Humate Concentrate is compatible with most materials, except those with a very low pH (less than 4.0). It is not compatible with calcium nitrate. To be safe, an initial jar test is always recommended when mixing 12% Humate Concentrate with companion materials for the first time.

12% HUMATE CONCENTRATE

Description for Use:

Whenever possible, Humate Concentrate should be applied in several smaller-dose applications rather than one larger-dose application. Humate Concentrate may be applied directly to the soil or used with foliar fertilizers.

Home Garden, Lawn & Soil:

Mix 1/8 tsp. per gallon of water for foliar feed and 1 tsp. per gallon for soil applications.

Soil Applications:

For direct soil applications, apply 1 to 6.5 gallons of Humate Concentrate per acre per application. Apply prior to germination and follow-up with soil applications every 4 to 6 weeks during the growing season.

Irrigation Applications:

For irrigation applications, apply 1 to 6.5 gallons of Humate Concentrate per acre, per application. Applications may be made every 4 to 6 weeks during the growing season. The optimal concentration is 1 ounce of concentrate per 10 gallons of irrigation water.

Foliar Applications:

If used with foliar solutions, apply 16 to 32 ounces of Humate Concentrate per acre. The spray concentration should range between 1 ounce of Concentrate per 1 gallon of spray and 1 ounce of Concentrate per 20 gallons of spray. The optimal concentration is 1 ounce of Concentrate per 10 gallons of spray.

*If used in conjunction with any herbicide, insecticide, or fungicide, always use 1 ounce of Concentrate per 10 gallons of spray, regardless of the total spray volume used or the total amount of Concentrate that will be delivered per acre.

Compost Teas (as fungal food):

Pre-activation: If you are pre-activating the compost tea ingredients, use 2.5 oz. of Humate Concentrate blended into the amount of ingredients you use per 25 gallons of tea brew. During Brewing: At the beginning of the brew cycle add 12 oz. of Concentrate per 25 gallons of tea solution.

Keep out of the reach of children.

Notice: It is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness, or other unintended consequences may result due to factors that are beyond the control of Neptune's Harvest or the seller. The buyer or user shall assume all such risks.

Warranty Disclaimer:

Neptune's Harvest warrants this product conforms to the description on its label and is reasonably fit for the purposes described on its label. In no event shall Neptune's Harvest or the seller be held liable for any incidental, consequential, or special damages resulting from the use or handling of this product. The exclusive remedy of the buyer or user for all claims shall be the return of the purchase price of the product.

As Required By Law.
