

Heliothis Trap – ASSEMBLY & USE

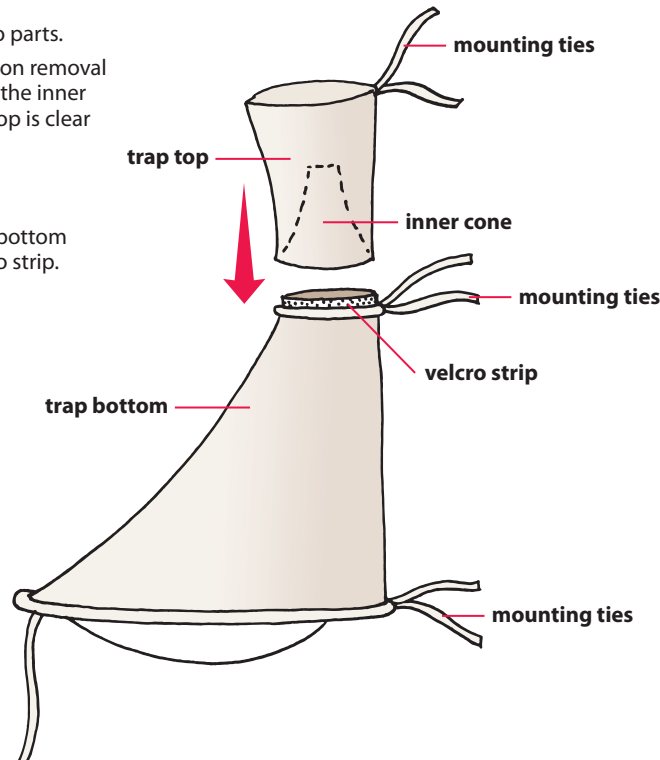

Item List: Trap Top • Trap Bottom

For use in monitoring:

Australian Bollworm
 Cotton Bollworm/Corn
 Earworm
 European Corn Borer
 Iowa Strain
 New York Strain
 Old World Bollworm
 Tobacco Budworm
 Wheat Headed Armyworm

1 The trap comes in two parts. Reshape the mesh upon removal from package so that the inner cone inside the trap top is clear and open.

2 Fit trap top over trap bottom and secure with velcro strip.

3 Mount assembled trap to a pole or stake of sufficient length to be driven firmly into the ground and allowing enough height to position trap above crop. The bottom of the trap should be kept about 2 inches (5 cm) above tops of plants. As the trap is inspected and serviced, it should be raised and re-tied to maintain this distance.

Tie trap tightly to pole with attached mounting ties to prevent trap from sliding down pole.

Secure the long front tie either to the pole or to the stake driven into the ground for wind protection.

4 Place lure at center of large bottom opening. Secure lure to string across opening with a paper clip.

Do not cross-contaminate. Each trap should be used for managing only one species.

5 **Trap servicing:** Trap top can be removed by pulling velcro fastening loose. Remove insects, replace trap top and refasten in place.

NOTE: Trap top is available separately (Catalog No. 10321).
