

Squash Vine Borer Moth Trap

Assembly Instructions

Grasp top and bottom of trap and pull apart, fold perforated ends inward to hold trap in a three dimensional shape as shown

Open foil packet, remove lure and place inside bottom of trap on sticky surface

Hang trap by placing included twist-tie hanger through the hole in the top of the trap, and hang in an appropriate location in garden plot.

Traps should be used in early spring at first bloom, continue through end of season. For best results hang traps at 2-3' height, 3-4' away from garden plot. Use one trap per 150 square feet of planted area.

Caution: Avoid contact of sticky surface with skin, eyes and clothing. Wet glue may be removed from fingers with cooking or mineral oil. Wash hands thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco. If irritation occurs, seek medical attention.

Storage: Keep cool and dry for maximum shelf life. Do not open outer package or foil lure pouches until ready to use.

Disposal: When sticky surface is full of insects or debris, dispose or recycle trap.
