

N-DURE
A Premium Inoculant for Alfalfa/True Clover Combination
Sinorhizobium meliloti and Rhizobium leguminosarum biovar trifolii

Product No: 3002 (Treats 50# of seed)
 Net Weight: 6 oz.
 Package Configuration: 60 units per case, 45 cases per pallet

Directions for Use:

The optimum method for applying N-DURE is by using the slurry method. Dampen the seed with non-chlorinated, clean, cool water at a rate of 8.5 oz. of water per 50 pounds of seed. Add appropriate amount of inoculant (2.5 oz./50 pounds of seed) and mix water, seed, and inoculant thoroughly until seed is uniformly coated. This method should be done in a container outside of the planter box. Allow 1-3 minutes for mixture to dry and then plant as soon as possible. N-DURE can also be applied dry directly onto the seed. Mix seed and inoculant thoroughly until seed is uniformly coated. Layering seed and inoculant will aide in this process. Applying the inoculant dry is also recommended for seed that is pre-treated with fungicide. However, maximum seed adhesion will not be obtained by applying this product dry. **This product is not solely recommended for first year ground or use on ground that is conducive to low rhizobia population due to environmental stresses, and should be combined with other INTX Microbials, LLC products if used in that situation.**

Storage of N-DURE:

Store N-DURE in a cool, dry place out of direct sunlight, preferably between 40°F and 77°F. Do not allow N-DURE to freeze or to be exposed to extreme heat. Do not open package until time of use. Once seed has been inoculated, plant as soon as possible and keep inoculated seed out of direct sunlight or hot drying winds. Re-inoculate if the seed is not planted within 24 hours after application. N-DURE carries a one season shelf-life.

Precautionary Information:

Although contents of this package are completely organic, avoid prolonged or repeated skin contact and inhalation. INTX Microbials, LLC recommends the use of a dust mask, safety glasses, and protective gloves when applying humus.

Minimum Guarantee:

This inoculant guarantees a minimum of 200 million (2×10^8) viable cells of **stated culture on front of package per gram.**

Limited Warranty:

INTX Microbials, LLC guarantees this culture to produce satisfactory nodule formation and nitrogen fixation under favorable conditions of soil and climate when used before expiration date and applied under the manufacturer's specifications, or purchase price will be refunded. An INTX Microbials, LLC representative must be notified of any field complaint within fifty (50) days after planting. Many factors other than nodulation affect crop performance. INTX Microbials, LLC assumes no responsibility for loss or partial loss of crop from any cause whatsoever. This Limited Warranty is in lieu of all other warranties, expressed or implied. The Limited Warranty is void where prohibited by law. If you have any questions about this products or any other INTX Microbials, LLC products, call (219) 474-5510 for assistance.
